

**For use with Titanium Grid Covers and
Perimeter Bottom Seal Systems**

**6962 Special EPDM
Anode Post Gaskets**

**Anode Post Gaskets
with Internal Ribs¹.
Available *with or
without* Fluoroplastic
Armor**

These Seal Designs and materials of construction were developed specially for Chlor-Alkali Diaphragm Cells using long-life-cycle **synthetic diaphragms**, and 1-1/4" - diameter anode posts.

They exhibit excellent chemical, compression set, and heat resistance, and are easy to seal.

¹ Ribs enable proper seal positioning around the anode post. Cavities between the ribs allow for internal lateral expansion of the gasket, upon anode post flange compression.
